DETAILED ACTION

1. The final rejection mailed 19 June 2007 is withdrawn. The following action is responsive to the amendment filed 16 August 2007.

Claim Rejections - 35 USC § 112

2. Claims 13 and 15-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The newly recited recitation in each of claims 13, 20 and 21 that the corner posts are rectangular is not understood in light of the original description. The posts as set forth in section 11 of the specification (which includes the top flap as well as vertical lengths of the side panels) was never set forth as rectangular. The top of the container as indicated in section 30 of the specification includes rectangular corner flaps. Since a rectangular shape is two dimensional, it is unclear how the corner posts, which are three dimensional as described, constitute a rectangular shape. A three dimensional shape would be, e.g. parallelepipedal. For the purpose of applying the prior art below with respect to claims 13 and 15-21, it is assumed that the corner flaps as opposed to corner posts are being referred to as "rectangular".

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3,13 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over 4. Bone. Bone discloses top panel (95, 105, etc), first and second side panels 90, top panel tab 70, a first score line formed by the center tear line and second score lines between removable portions 90 and corner flaps 105 at each corner. The corner portions 105 and the portions of the respective side panels and end panel therebelow are considered to form corner posts insofar as claimed. Bone does not disclose a rectangular shape to the corner flaps. It would have been an obvious matter of design choice to change the form or shape of the corner flaps to a rectangular shape in Bone as a mere selection of one shape over any other. No functional distinction is seen between the shape claimed and that shown in the prior art to Bone. Design applications are available to obtain patent protection where the sole distinction between the prior art is one of shape or aesthetics. Also, no convincing argument has been made that the particular shape claimed is significant or is more than one of numerous configurations a person of ordinary skill in the art would have found obvious. See Graham v. John Deere Co., 148 USPQ 459 (1967) and In re Dailey, 149 USPQ 47 (CCPA 1976). With respect to claim 15, Bone discloses corners with a length along the respective side and end panels which is very small as compared to the overall lengths of the side and end panels. However, Bone does not disclose a length of the corner posts along the respective side panels and the end panel of about 1 cm. It would have been an obvious matter of design choice to make the lengths of the corner posts along the respective side and end panels in Bone about 1 cm as a mere selection of one size over another. No functional distinction can be seen nor has any been asserted by Applicant with respect to the claimed size over the size(s) shown in the prior art. A mere change in the size of a component has generally been held unpatentable. See In re Rose, 105 USPQ 237 (CCPA 1955). It is noted

that the ability to size a container to hold a given size or height of content is well within the level of skill in this art. The sizing of the corner posts is considered related to the overall size of the container which is a function of size of the desired contents one wishes to package. With respect to claims 16 and 17, Bone discloses all structure of the claimed carton except a length of the corner post in the side panels of about 8.3 cm and, with respect to claim 17, a length into the end panel of about 8 cm. It would have been an obvious matter of design choice to make the lengths of the corner posts in Bone within the side and end panels of about 8.3 cm and 8 cm, respectively as a mere selection of one size over another. No functional distinction can be seen nor has any been asserted by Applicant with respect to the claimed size over the size(s) shown in Bone. A mere change in the size of a component has generally been held unpatentable. See In re Rose, 105 USPQ 237 (CCPA 1955). It is noted that the ability to size a container to hold a given size or height of content is well within the level of skill in this art. The sizing of the corner posts is considered related to the overall size of the container which is a function of size of the desired contents one wishes to package.

5. Claims 1, 3, 13, 16, 17, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mazocky (EP '029). Mazocky discloses a top panel, side panels 4, 5, top panel tab 11, a first score line 17 extending between sides 4, 5 in the near the center of the top wall, second score lines 17 respectively extending at an angle from the side panels to the end panel and corner flaps formed by the angled score lines. With respect to claims 13 and 19, the corner flaps formed in the top wall and the sections of the side walls and end walls therebelow are considered to form corner posts insofar as claimed. With respect to claim 20, it is noted that the top enclosure or panel, the side enclosures or panels and the end enclosures or panels include

multiple score lines (e.g. note sections 3a in the end panel) defining the corner posts insofar as claimed. Mazocky does not disclose a rectangular shape to the corner flaps. It would have been an obvious matter of design choice to change the form or shape of the corner flaps to a rectangular shape in Mazocky as a mere selection of one shape over any other. No functional distinction is seen between the shape claimed and that shown in the prior art to Mazocky. Design applications are available to obtain patent protection where the sole distinction between the prior art is one of shape or aesthetics. Also, no convincing argument has been made that the particular shape claimed is significant or is more than one of numerous configurations a person of ordinary skill in the art would have found obvious. See Graham v. John Deere Co., 148 USPQ 459 (1967) and In re Dailey, 149 USPQ 47 (CCPA 1976). With respect to claims 16 and 17, Mazocky discloses all structure of the claimed carton except a length of the corner post in the side panels of about 8.3 cm and, with respect to claim 17, a length into the end panel of about 8 cm. It would have been an obvious matter of design choice to make the lengths of the corner posts in Mazocky within the side and end panels of about 8.3 cm and 8 cm, respectively as a mere selection of one size over another. No functional distinction can be seen nor has any been asserted by Applicant with respect to the claimed size over the size(s) shown in Mazocky. A mere change in the size of a component has generally been held unpatentable. See In re Rose, 105 USPQ 237 (CCPA 1955). It is noted that the ability to size a container to hold a given size or height of content is well within the level of skill in this art. The sizing of the corner posts is considered related to the overall size of the container which is a function of size of the desired contents one wishes to package.

Claims 1-3, 6, 7, 13, 16, 17 and 19-21 are rejected under 35 U.S.C. 103(a) as being 6. unpatentable over Quantance. Quantance discloses a top panel 12, 160, side panels 14, 18 along two opposite sides of the carton, an end panel 14, 18 between the side panels, top panel tab 14 at the end of the carton, a first top score line between 12 and 14 at the opposite end of the carton, second top score lines 16 at the first end of the carton forming corner flaps 160 and side panel tabs 18 with side panel score lines 16 formed in the side panels as claimed. Quantance does not disclose a rectangular shape to the corner flaps. It would have been an obvious matter of design choice to change the form or shape of the corner flaps to a rectangular shape in Quantance as a mere selection of one shape over any other. No functional distinction is seen between the shape claimed and that shown in the prior art to Quantance. Design applications are available to obtain patent protection where the sole distinction between the prior art is one of shape or aesthetics. Also, no convincing argument has been made that the particular shape claimed is significant or is more than one of numerous configurations a person of ordinary skill in the art would have found obvious. See Graham v. John Deere Co., 148 USPQ 459 (1967) and In re Dailey, 149 USPQ 47 (CCPA 1976). With respect to claims 16 and 17, Quantance discloses all structure of the claimed carton except a length of the corner post in the side panels of about 8.3 cm and, with respect to claim 17, a length into the end panel of about 8 cm. It would have been an obvious matter of design choice to make the lengths of the corner posts in Quantance within the side and end panels of about 8.3 cm and 8 cm, respectively as a mere selection of one size over another. No functional distinction can be seen nor has any been asserted by Applicant with respect to the claimed size over the size(s) shown in Quantance. A mere change in the size of a component has generally been held unpatentable. See In re Rose, 105 USPQ 237 (CCPA 1955). It is noted that

the ability to size a container to hold a given size or height of content is well within the level of skill in this art. The sizing of the corner posts is considered related to the overall size of the container which is a function of size of the desired contents one wishes to package.

Claims 1-7, 9, 13, 15-17 and 19-21 are rejected under 35 U.S.C. 103(a) as being 7. unpatentable over Auclair. Auclair discloses a top panel (16, 48, triangular corner sections), two side panels 14, 18, top panel tab 44, first score line 50, second score lines forming the triangular corners within the top panel, side panel tabs 60, 62 attached to the remainder of the side panels along score lines 52, 54 as claimed. Auclair does not disclose a rectangular shape to the corner flaps. It would have been an obvious matter of design choice to change the form or shape of the corner flaps to a rectangular shape in Auclair as a mere selection of one shape over any other. No functional distinction is seen between the shape claimed and that shown in the prior art to Auclair. Design applications are available to obtain patent protection where the sole distinction between the prior art is one of shape or aesthetics. Also, no convincing argument has been made that the particular shape claimed is significant or is more than one of numerous configurations a person of ordinary skill in the art would have found obvious. See Graham v. John Deere Co., 148 USPQ 459 (1967) and In re Dailey, 149 USPQ 47 (CCPA 1976). With respect to claim 15, Auclair discloses corners with a length along the respective side and end panels which is very small as compared to the overall lengths of the side and end panels. However, Auclair does not disclose a length of the corner posts along the respective side panels and the end panel of about 1 cm. It would have been an obvious matter of design choice to make the lengths of the corner posts along the respective side and end panels in Auclair about 1 cm as a mere selection of one size over another. No functional distinction can be seen nor has any been asserted by Applicant

with respect to the claimed size over the size(s) shown in the prior art. A mere change in the size of a component has generally been held unpatentable. See In re Rose, 105 USPQ 237 (CCPA 1955). It is noted that the ability to size a container to hold a given size or height of content is well within the level of skill in this art. The sizing of the corner posts is considered related to the overall size of the container which is a function of size of the desired contents one wishes to package. With respect to claims 16 and 17, Auclair discloses all structure of the claimed carton except a length of the corner post in the side panels of about 8.3 cm and, with respect to claim 17, a length into the end panel of about 8 cm. It would have been an obvious matter of design choice to make the lengths of the corner posts in Auclair within the side and end panels of about 8.3 cm and 8 cm, respectively as a mere selection of one size over another. No functional distinction can be seen nor has any been asserted by Applicant with respect to the claimed size over the size(s) shown in Auclair. A mere change in the size of a component has generally been held unpatentable. See In re Rose, 105 USPQ 237 (CCPA 1955). It is noted that the ability to size a container to hold a given size or height of content is well within the level of skill in this art. The sizing of the corner posts is considered related to the overall size of the container which is a function of size of the desired contents one wishes to package.

8. Claims 11 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bone in view of any one of Stompe, Schmidt et al or Hunt, Jr. Bone discloses all structure of the claimed carton except a finger cut out within the top panel (cl. 11) or the removable portion (cl. 18) (Bone discloses a finger flap formed by the cut 120 which forms a finger opening when pressed inwardly). Each of Stompe, Schmidt et al and Hunt, Jr. teaches that it is known to make a finger engagement element as a cut out. It would have been obvious to make the finger engagement

element in the top wall in Bone as a cut out as taught by any one of Stompe, Schmidt et al or Hunt, Jr. to allow easier engagement by the finger and to eliminate interference by the folding tab with the contents (when the tab would be pressed inwardly).

9. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Auclair in view of Holley, Jr. '435 and any one of Stompe, Schmidt et al or Hunt, Jr. Auclair discloses all structure of the claimed carton except finger cut outs formed in the side panel tabs. Holley, Jr. teaches that it is known to make a removable dispensing portion in a container with side panel finger engagement elements to facilitate removal of the side panel portions from the remainder of the side panels. Each of Stompe, Schmidt et al and Hunt, Jr. teaches that it is known to make finger engagement elements in a container using cut outs as opposed to openings formed by folding tabs. It would have been obvious to make the side panels in Auclair with finger engagement elements as taught by Holley, Jr. and to make the finger engagement elements as cut outs as taught by any one of Stompe, Schmidt et al or Hunt, Jr. to allow clean separation of the side portions of the removable portion during opening and since openings provide less chance of interference by the side flaps with the contents.

Allowable Subject Matter

10. Claim 8 is allowed.

Response to Arguments

11. Applicant's arguments filed 16 August 2007 have been fully considered but they are not persuasive.

The remarks assert that, since the top flaps of the corner posts are described as rectangular in the specification, the recitation in the claims that the corner posts are rectangular does not

Application/Control Number: 10/709,774

Art Unit: 3782

constitute new matter. In response, the original disclosure is unclear with respect to how the corner posts are rectangular. As indicated above, the corner posts as described in section 11 are three dimensional. It appears that the original description is referring to the two dimensional top flaps as opposed to the corner posts as claimed.

The remarks assert that a rectangular shape to the corner flaps would retain the contents better than the shapes shown in the prior art of record. In response, it is not agreed that a rectangular shape would retain the contents any better than the shapes shown the prior art. The contents would fit under either shape and be retained as well. It would appear that the ability to retain contents is a function of how large the flap is as opposed to the shape of the edge. With respect to claims 13 and 15-21, note is also made of paragraph 1 above.

With respect to Mazocky, the remarks assert that the fold line along the top wall extending between the opposite sides does not constitute a score line. In response, score lines in this art include fold lines and tear (or cut) lines. Any line formed by an indentation in the material is a "score" line. With respect to claim 20, the remarks assert that the score line in Mazocky does not extend along the top, side and end enclosures as claimed, i.e. the score lines in Mazocky are confined to the top enclosure. In response, the term "along" does not necessarily mean within.

With respect to Quaintance, the remarks assert that the construction of Quaintance does not include a first score line which extends across the top panel from the first side panel to the second side panel. In response, one the score lines 16 in Quaintance extends from a side panel to another side panel. Nothing within the claims precludes the two claimed side panels from being adjacent.

Application/Control Number: 10/709,774

Art Unit: 3782

Conclusion

Page 11

12. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
